[DOCUMENT NAME] Abstract

[ABSTRACT]

[OBJECTIVE] To provide a method for verifying that a predetermined amount of a sample solution is held in a sample cell during the inflow of the sample solution into the sample cell. Particularly, to provide a method for verifying that a predetermined amount of a urine required for the test is held while the urine discharged into a toilet bowl is received by a sample cell in a bowl space of the toilet bowl, when a urine is tested.

[SOLVING MEANS] A method for verifying an amount of a sample solution, a method for controlling a measurement system and a method for measuring a concentration of a sample solution comprising the steps of: detecting at least one selected from the group consisting of a transmitted light component, a scattered light component and a reflected light component of a light by a photosensor while irradiating a sample solution, which is being injected into a sample cell, with the light; and verifying that a predetermined amount of the sample solution is held in the sample cell based on a change in an output signal from the photosensor.
